## **1. About us:**

International knowledge platform, that develops the mechanisms of accumulation, acceleration, progression and transfer of expertise, practices from different fields, creating the unified, integrated solution for reforming state sector in young democratic countries and transitional economies.

Our multidisciplinary group unify experts from various direction and organizations. We work as an integrators - in joint cooperation with different parties, starting from the problem identification to solution designing based on the innovative tools and their implementation.

IDF Reforms Lab Kyiv is operating since November 2015, and has become a successful platform: open coworking space for public discussions, conferences, roundtables and presentations for supporting the development of innovative solutions.

## **2. Mission**

To support and participate in development of the innovative potential, sustainable growth for communities of young democracies and developing countries, for further integration into a global “society of knowledge”

## **3. Basic Directions:**

### **eGOV**

- eServices, eProcurements, eAuctions
- State registries, Identification systems (ID, Passports, E-signature)

### **Enforcement bodies / Anticorruption**

- Prosecutors office
- NABU (national anti corruption bureau)
- Customs

### **Social Reform**

- Healthcare, Education
- IDP

### **Smart Management**

- Decentralisation
- Local Government
- Charter cities
- Regional development

### **Economy**

- Deregulation
- Privatisation
- Blockchain, crypto-economy

## 4. International projects

- Civil Acts - Ministry of Justice
- Public service halls (Odessa, Kiev)
- eProcurements - Prozorro
- IDP (Humanitarian Aid Information and Management System)
- Anti corruption Bureau concept, implementation plan
- Prosecutors office: Vision, Regional office reform, E case management (PwC, DFID)
- General prosecutors office - Reform of local prosecutors' offices
- Privatization procedures (MinAgro)
- Public smart services: Registration of property and business
- Land Formation reform
- ID, Passport issuance
- Healthcare reform
- eAuction 3.0 - IDF, Distributed lab, Microsoft, Oshadbank, Privatbank, UnityBars
- State 3.0 - The Government of future
- Educational programs – (Knowledge and experience transfer among local community groups)

## 5. Partners: 2014 - 2016 (Ukraine)

Different governmental entities:

- President's administration
- Ministries, agencies, offices (Justice, Internal affairs, Agro-politics, Social-politics, State registration services...), registries (Property, physical, legal entities, Land)
- Law enforcement authorities (Prosecutors office, Anti-corruption bureau)
- Regional and city administration (Kiev, Odessa, Ternopil)
- International and local organizations / companies: UNHCR, DFID, USAID, IDLO, PwC, Deloitte, Microsoft, IBM, Intel...

## 6. 5D Principle

Reforms directions are based on **5D Principle**:

- **Deregulation** - Elimination of inefficient and rudimentary functions of the state, liberation of citizens from unnecessary procedures, restriction of the state control over the business activities in their respective areas.
- **Debureaucratization** - Simplification of the bureaucratic procedures. Bureaucracy should be a service, a means of development - not a problem.
- **Demonopolisation** - Elimination of monopolies at all levels and development of a competitive environment.
- **Decentralisation** - Dispersing certain functions from central government to the local government bodies.
- **Deconcentration** - The concentration of multiple functions in single institutions create grounds for uncontrolled power. Through deconcentration, most of the functions are redistributed to the industry associations, non-profit professional organisations and businesses.

### 7. IDF Projects: Reforms Lab

Reforms laboratory accumulates knowledge from different fields of innovative public governance and expertise around public sector reforms. It also delivers tools to develop and share experience around reforms for public sector in post soviet regions. Reforms Lab has been an open space for dozens of conferences, public discussions, round tables and presentations about cutting edge technologies in e-governance.

*\* Several events held in IDF Reforms Lab*

*Public discussion with international organisations, NGO sector and state bodies of Ukraine. There were presented and discussed Odessa reforms package*

*Blockchain Conference Kiev for the second time a unique fundamental platform in Ukraine where the world's opinion leaders in IT sector talked about the principles of the virtual coins, distributed technology and their usage in public and private sector.*

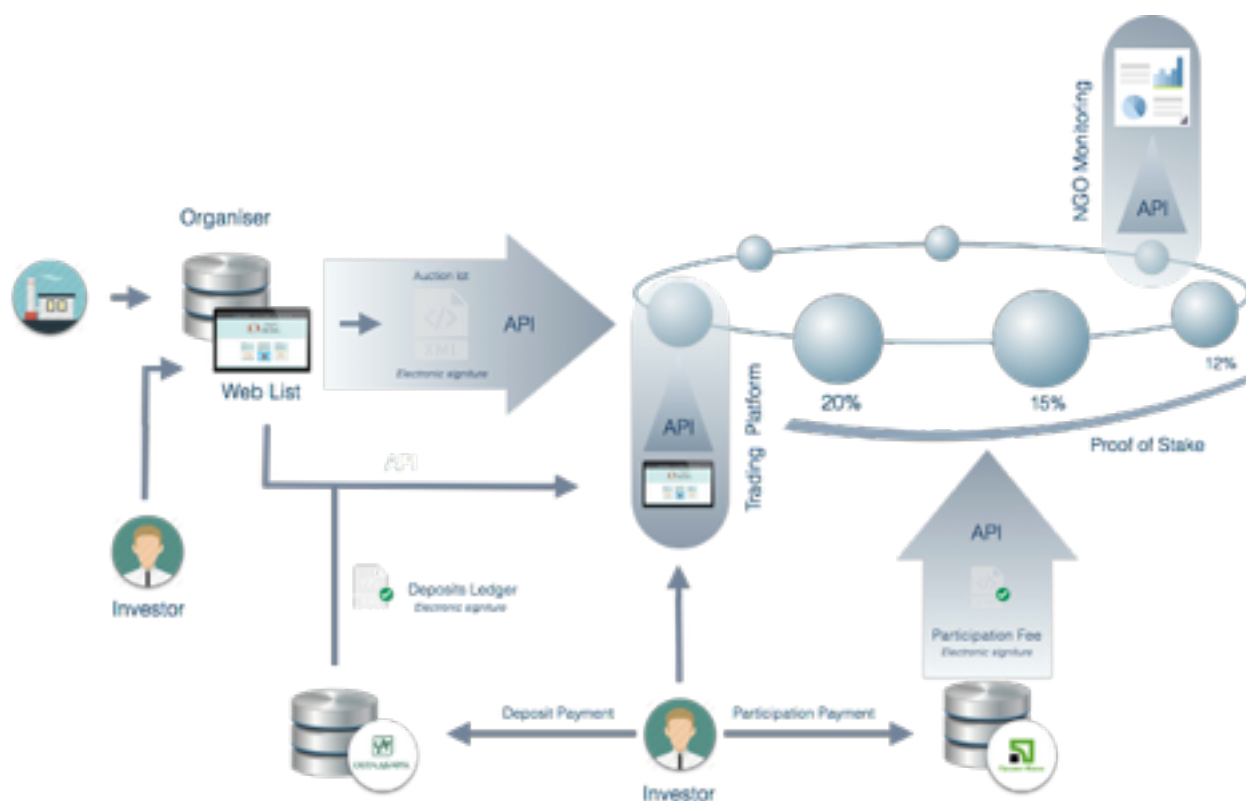

*Discussion about the Privatisation process of state enterprises and existing barriers, with the ministry of agriculture and Odessa governor.*

### 8. IDF Projects: e-Auction 3.0

In October 2015 Innovations and Development Foundation began working on a next generation of decentralised, blockchain E-auction system. The platform is built for supporting non-corrupt, transparent privatisation process of state and regional property, land and enterprises. The first phase of the project was launched in February 2016.

The strategy for improving the state property privatisation and lease process is based on the emerging, innovative models, that apply transformational changes to components which are relevant for Ukraine. Models offer the latest technological solutions, such as complete decentralisation/distribution based on blockchain and transparency for easy monitoring through API. Overall such innovative approaches will allow the minimisation of state budget spendings and offer completely new citizen oriented system developments.

The project started out as a pilot, small scale system to be piloted and launched in Odessa region, for municipal property privatisation and lease. During last period, the interest in development and integration of new blockchain based e-Auction system has grown from other central and regional level state entities as well.

### 8. IDF Projects:

**E - Governance:** The strategy for improving the Egovernance system are based on the emerging, innovative models, that apply transformational changes to components which are relevant for Ukraine. Models offer the latest technological solutions, such as complete decentralisation/distribution based on blockchain and transparency for easy monitoring through API.

**Privatization:** The strategy for launching the privatization process is based on the emerging, innovative models, that apply transformational changes to components which are relevant for Ukraine. Our approach offers a system where process of privatization can not be interfered or deterred by the bureaucrat. Through implementation of such innovative models, bureaucratic and manipulation risks are lowered. System is decentralized, that creates the mechanisms of self sustainability and distributed, non interfering development.

**Tax Reform:** The objective of the reform is to transform the monopolistic, bureaucratic, and corrupt tax system to the self-developing, competitive system operated by the private actors. The key to the system is distributed governance, mutual control and transparency. The innovative approach allows the transformation of the tax system with the minimized state budget spending. The system should be based on the following key principles: Participation of private actors, Crowdfunding (public monitoring), Legal financial interest for all participants, Transformation from centralized/vertical to distributed/horizontal (Blockchain) system.

**Criminal Justice Policy Planning exercise:** Planning and exercising policy in various direction within criminal justice sphere should be evidence based. Therefore, it is key to devise to formalize the process, devise it into components and conduct regular cycles. In particular:

- 1.1. Analysis of existing crime statistics;
- 1.2. Conducting victimization survey (similar to British Crime Survey);
- 1.3. Conduct focus groups semi-structured and in-depth interviews with stakeholders;
2. Plan priorities on State, Regional and local levels;
3. Plan and implement policy through (a) relevant day-to-day practices; and (b) specifically designed projects, which mainly deal with crime prevention through raising public awareness.

**Development of an Open Office at NABU:** The project will aim at providing opportunities to internal groups to contribute to achieving investigative goals of the NABU. In particular, the project will envisage equipment of the office, so that visits are most conducive to the goals, as well as training of staff, which includes officers and Call Center staff.

**Open investigative function for the NABU, based on wiki engine:** The initiative will include cooperation with NGO to launch collection of data about subjects of investigation through a wiki function. Could be part of an Open Office initiative.
